# Adding the MiniMax models to OpenCode

Quick guide for course participants · OpenCode desktop app

**What you need:** OpenCode installed, and the MiniMax **API key** you received from me. You do not need a MiniMax account of your own. Treat the key like a password.

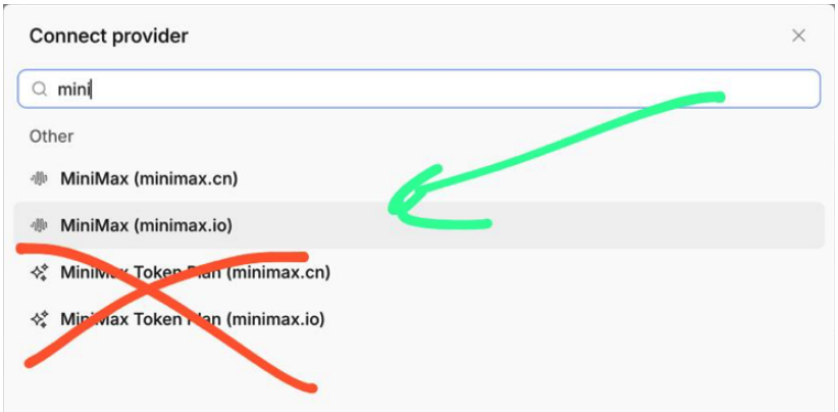

## Step 1. Open "Manage models" and click "Connect provider"

In the OpenCode app, open **Manage models** (from the model selector in the chat box). Click **+ Connect provider** in the top-right corner.

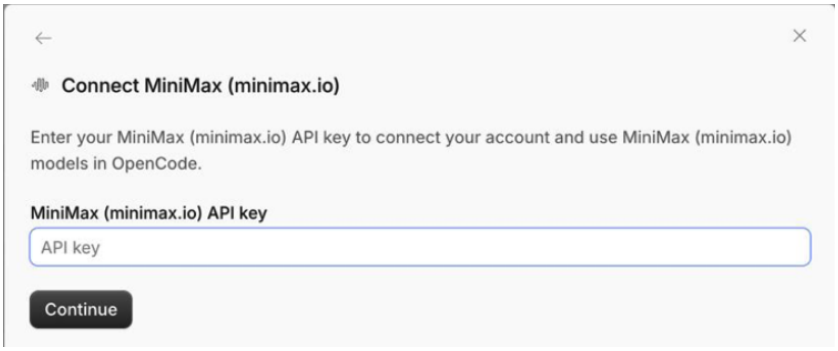

## Step 2. Search for MiniMax and pick the right entry

Type **mini** in the search box. Click **MiniMax (minimax.io)** (green arrow). Do **not** choose the two *Token Plan* entries (red cross): they do not work with the course key. Ignore *MiniMax (minimax.cn)* as well: that is the Chinese platform, and we use minimax.io.

## Step 3. Paste your API key

Paste your key into the **API key** field and click **Continue**. Check that you copied the whole key, with no spaces before or after it.

## Step 4. Switch the models on and select one

Back in **Manage models**, search for **MiniMax** and switch on the models you want with the toggle on the right. Only switched-on models appear in the model selector. Then pick a MiniMax model in the selector before you start working.

## Step 5. Test it

Send a short test prompt, for example: *"List the files in this project and say what each folder is for."* If you get an answer, you are set. Note the model name in your **log.md**.

## Using OpenCode in the terminal instead?

Type **/connect**, search for **MiniMax**, choose **MiniMax (minimax.io)** (again, not *Token Plan*) and paste your key. Then type **/models** and select a MiniMax model.

## If it does not work

| Problem | What to try |
|---|---|
| The key is rejected | Make sure you chose **MiniMax (minimax.io)**, not *Token Plan*. Re-copy the key in full. Check that you picked the **minimax.io** entry, not *minimax.cn*. |
| No MiniMax models in the selector | Go back to **Manage models** and switch them on (Step 4). |
| Still stuck | Use the free OpenCode Zen models for now, and bring a screenshot of the error to class. |

**Keep your key private.** Never paste it into a prompt, a script, **AGENTS.md** or anything you upload to GitHub. It is shared by the course, and anyone who has it can use up our credit.
